

## How Patches Grow Up and Go to School

Khouloud Touil & Kevin Hilman  
, BayLibre

# Introductions BayLibre

## BayLibre

- embedded Linux consultancy
- based in Nice, France
- ~40 engineers
- open-source focus
  - top 20 Linux kernel contributor
  - top 5 AGL contributor
  - u-boot, Zephyr, ATF, OP-TEE, Yocto
  - automated testing, SOTA

## Khouloud

- SW engineer
- based in Nice, France
- KernelCI contributor

## Kevin

- co-founder, Sr. Engineer
- Linux kernel developer, maintainer
- based in Seattle
- co-founder KernelCI project

# Um, so what is... KernelCI

A free **service** for testing Linux on a huge variety of hardware platforms  
<https://kernelci.org>

An open source **project**  
*the software behind the service*

A **collaboration hub** for hardware-focused, open source testing and automation

## Mission Statement

To ensure the quality, stability and long-term maintenance of the Linux kernel by maintaining an open ecosystem around test automation practices and principles.

<https://foundation.kernelci.org/mission-objectives/>

# Founding Members

# How a patch grows & goes to school

## Newborn

- Just an idea

## High school

- **linux-next**
- fight with friends

## Toddler years

- review on **mailing list**
- falls down a lot

## University

- **mainline**
- make new friends

## Primary school

- lands in **maintainer tree**
- learns to play well with others
- maybe gets teased a bit

## Graduation

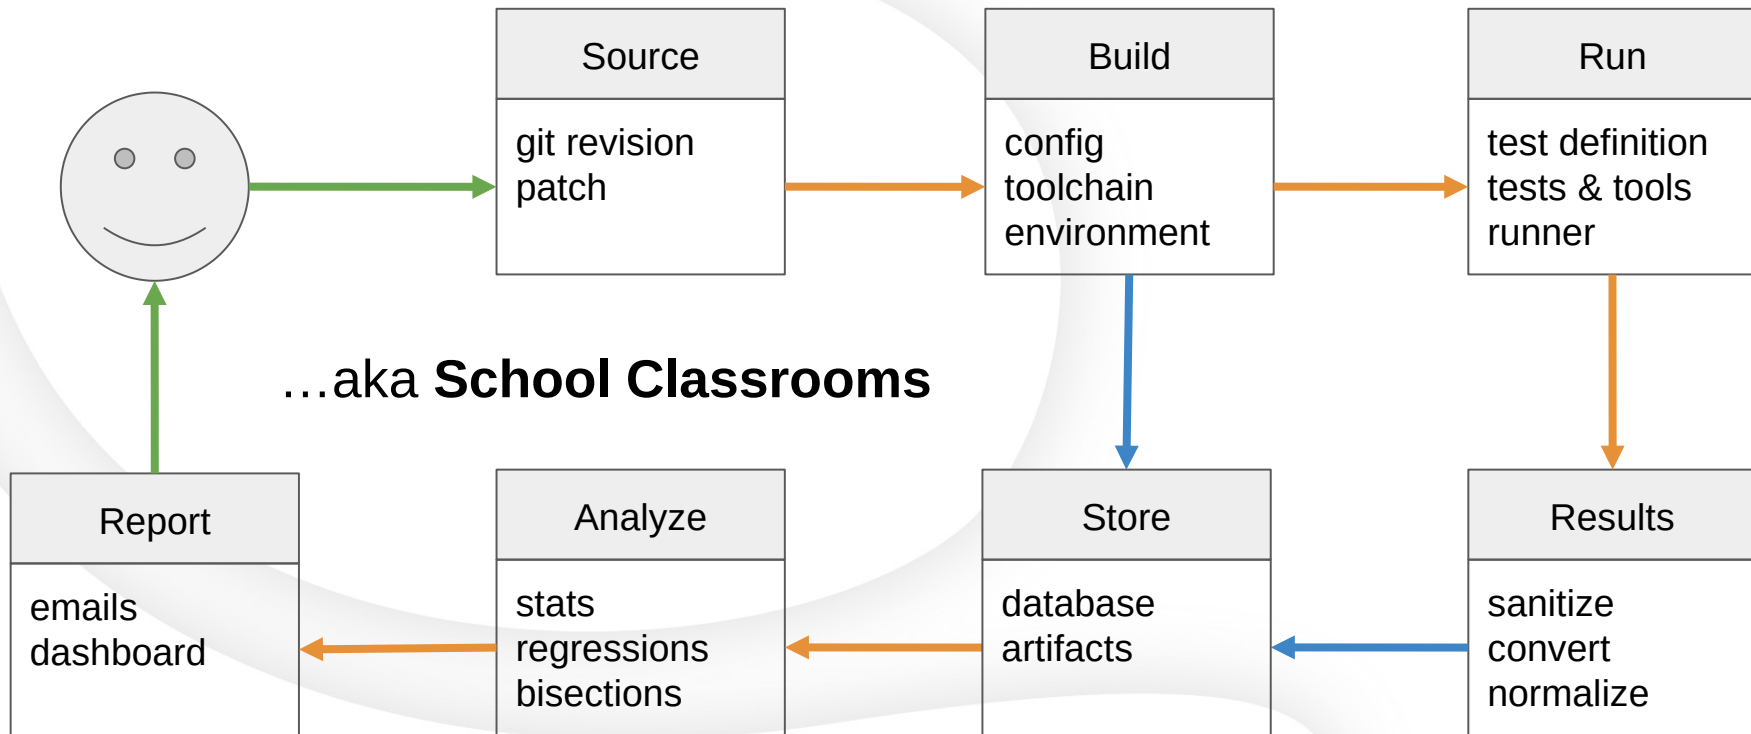

- Long-term stable (**LTS**)
- get a commercial job

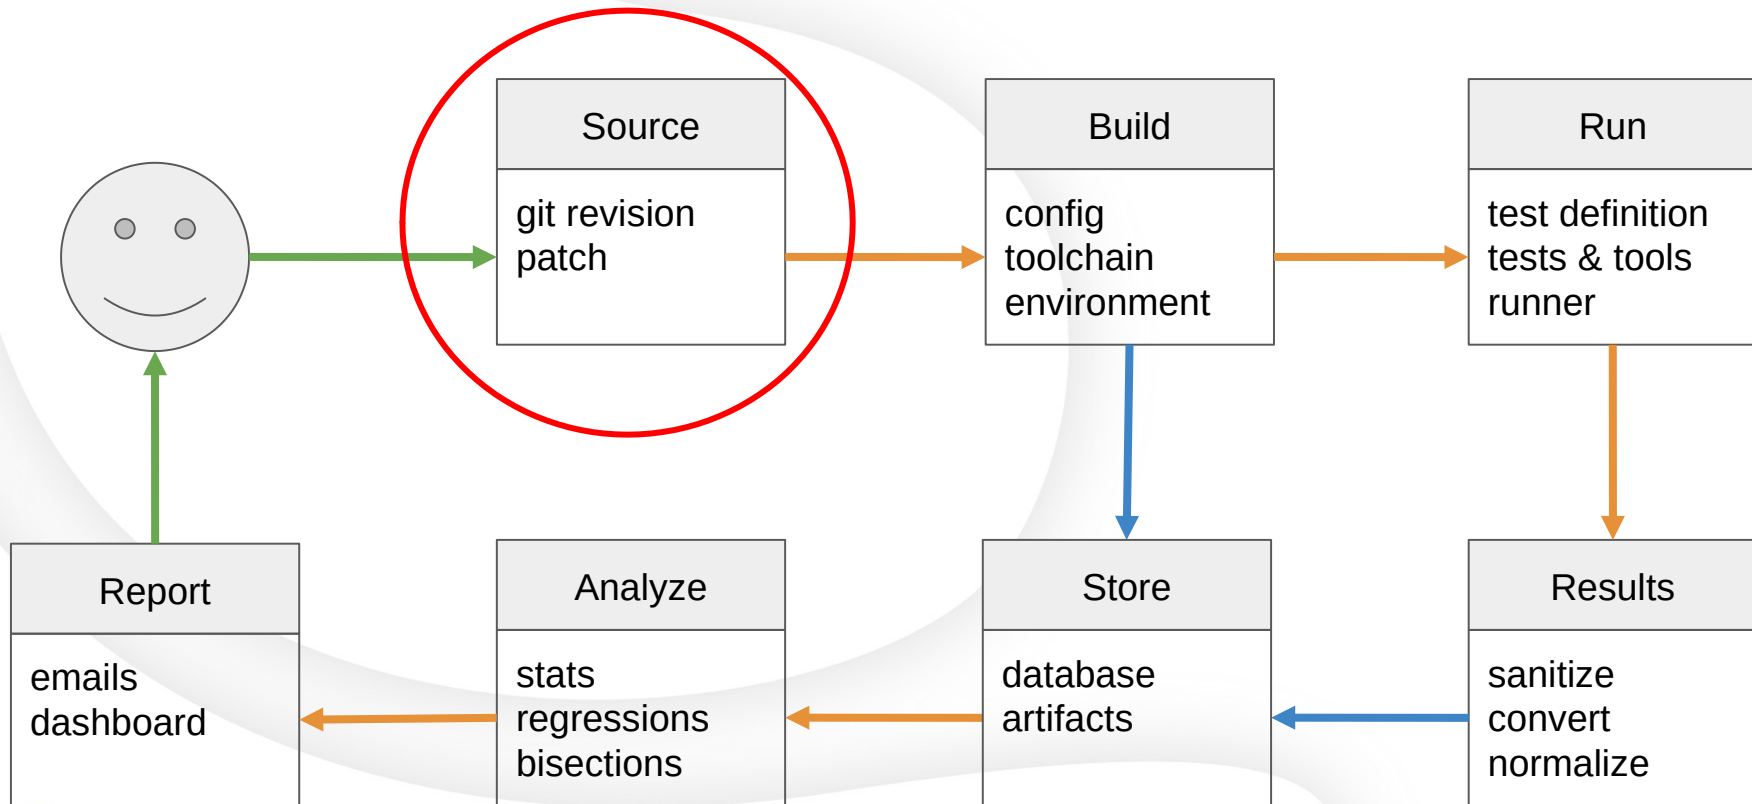

Caveat: not all students follow this path. It's entirely possible to get a job without going to university. c.f. `PREEMPT_RT`

# KernelCI Modular Pipeline

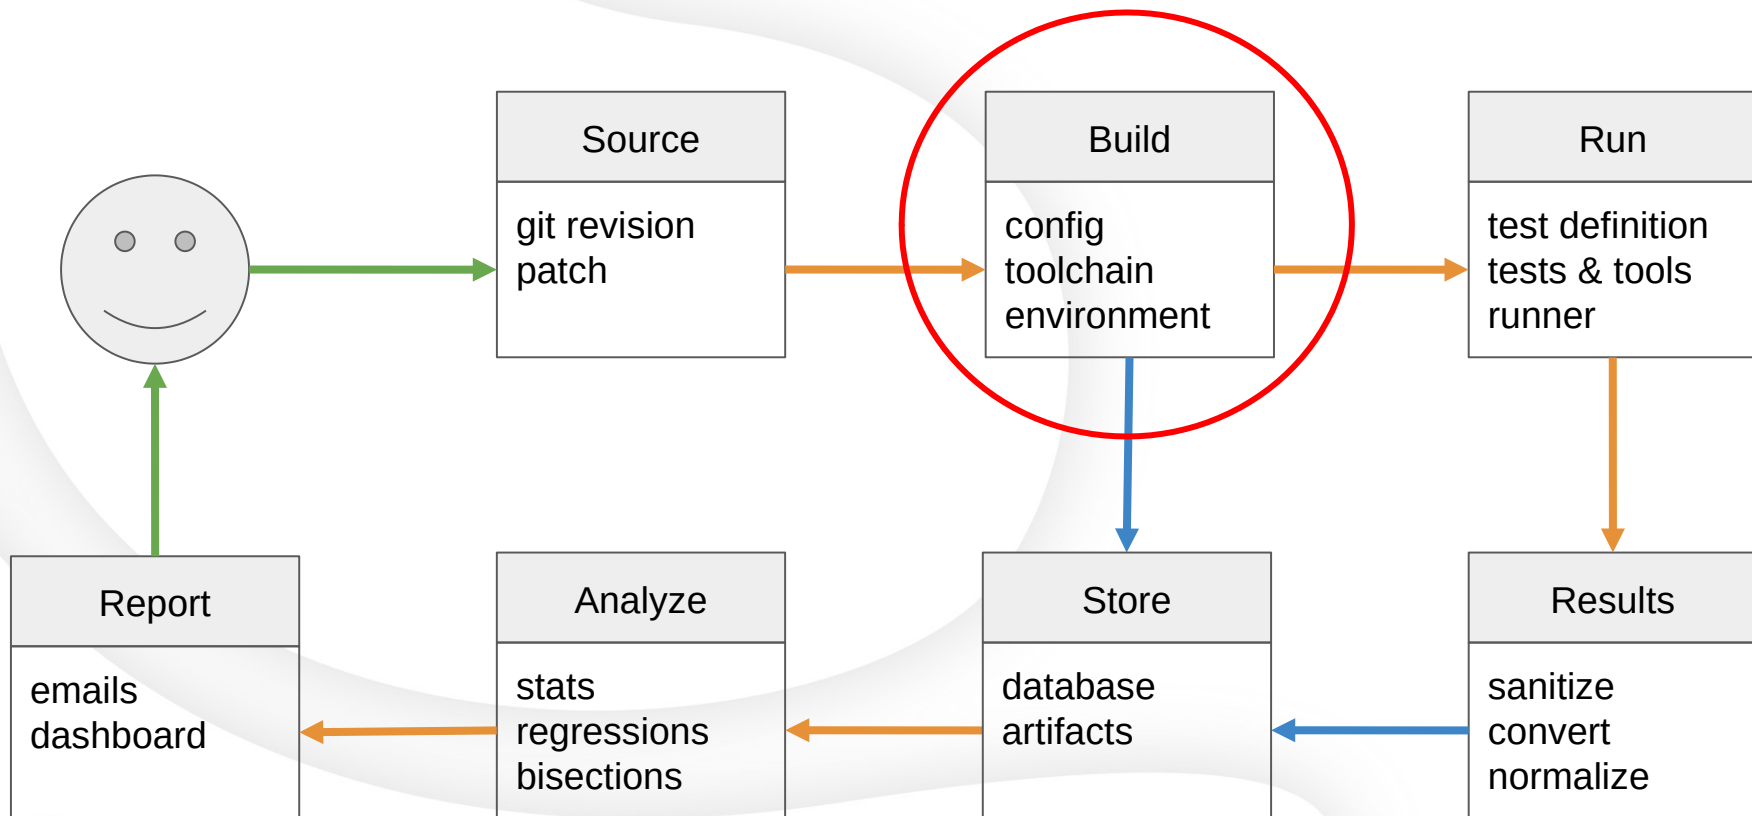

# Source - Next

Test patches and series directly from mailing-list

Integration with new maintainer tooling (e.g. b4)

More compute = more builds

# Kernel Builds

For each source tree

- multi-arch: arc, arm[64], x86, mips, RISC-V
- multi-compiler: gcc, clang
- multi-defconfig: upstream defconfigs, all\*config
- per-tree customization: build-configs.yaml
- modules, kselftests

Orchestration / devops

- CI/CD pipeline (Jenkins)
- Static VMs, cloud VMs
- Kubernetes

Stats

- average > 2000 builds/day

kubernetes

Google Cloud

Azure
